What Can NVR5000-I Do?

Perimeter Protection

ANPR

People Counting

POS

Heat map

Metadata

Face Recognition

Perimeter Protection

What is Perimeter Protection?

Perimeter protection system refers to the fortifications built to either keep intruders out or to keep captives contained within the area the boundary surrounds.

Monitoring Area

Plant perimeter, fence...

Limited Access Area

No parking area, military base

Danger Area

Construction site, river bank

Customer Requirements of Perimeter Protection

End user

- ➔ Reliably and accurately alarm when intrusion
- ➔ Quickly response & early warning
- ➔ Low maintenance cost
- ➔ Tracking & Accurate positioning

SI/Installer

- ➔ Easy installation & adjustment
- ➔ High stability/performance
- ➔ High cost performance

Animals

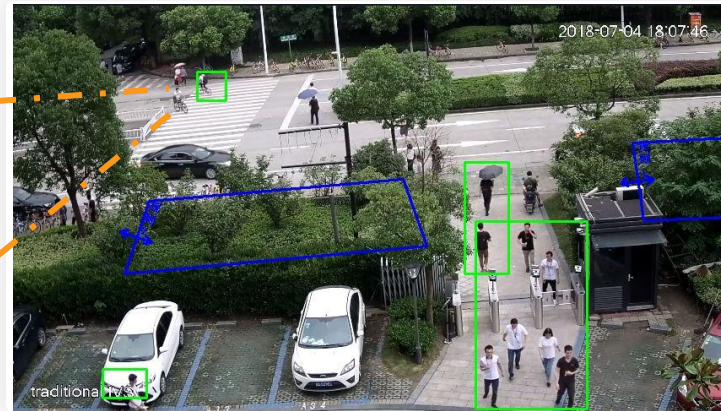

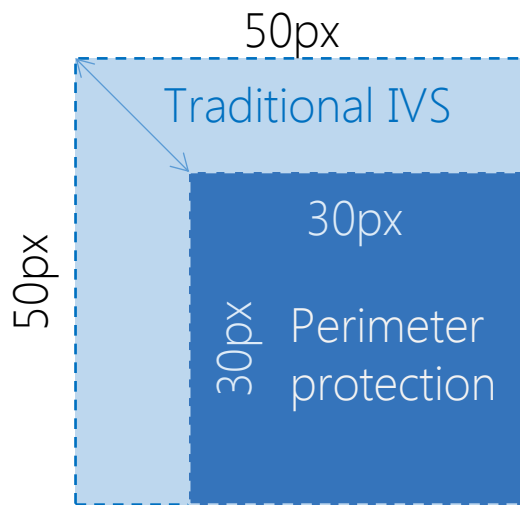

Lower False Negatives Rate

Accuracy

64% lower Pixel Count Requirement

Requires 64% less pixels in order to detect and trigger intrusion alarms compared to traditional IVS solutions without compromising its accuracy or error rate, allowing each perimeter protection camera to cover larger areas from further away.

Traditional IVS

- Missed alarms
- Groups of people are regarded as 1 trigger
- Distant objects are not tracked

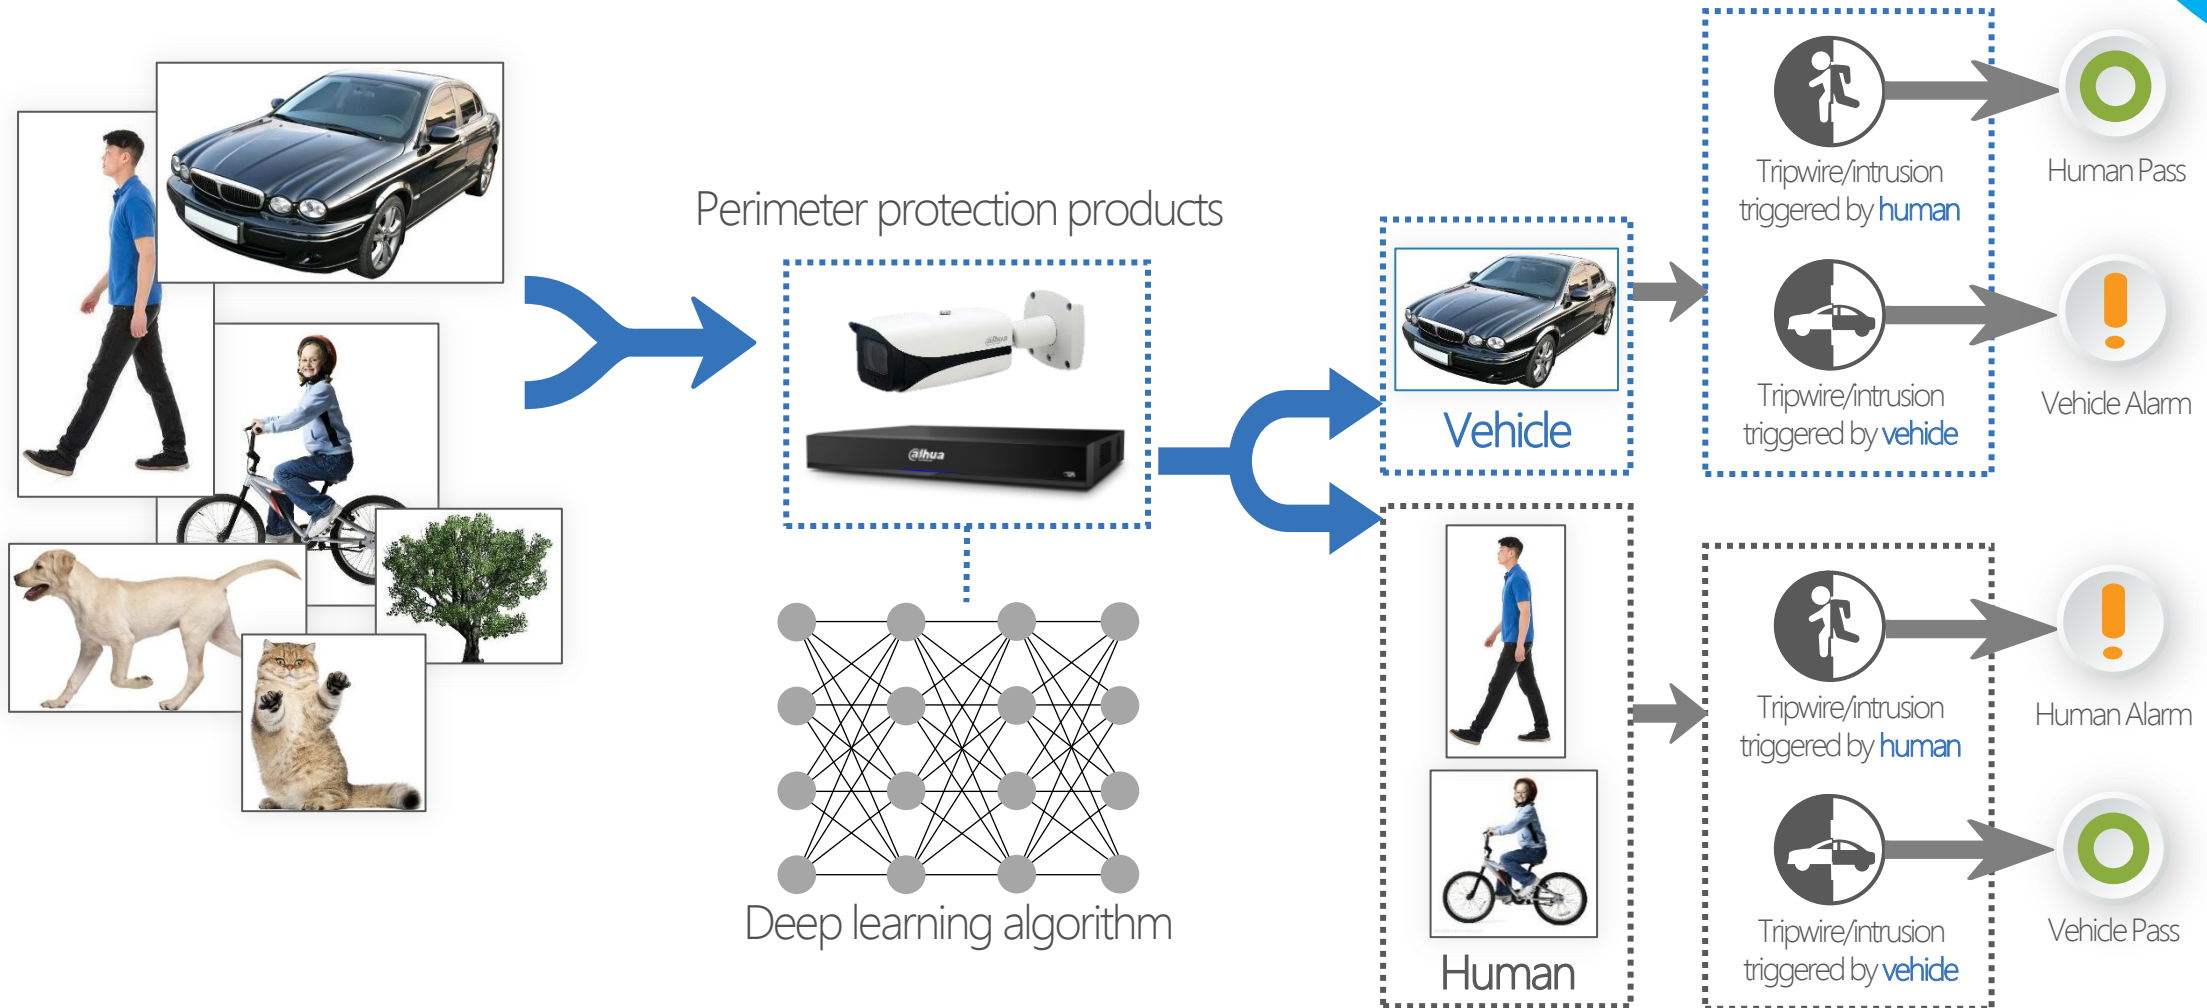

Perimeter protection

- All humans & moving cars detected
- Each person is counted and tracked individually
- Distant objects can be detected

Custom Perimeters based on Object Type

Classification

Custom Perimeters based on Object Type

Classification

Human intrusion: triggered only by human

Vehicle intrusion: triggered only by vehicle

Where to use?

All kinds of industries and scenarios that require high alarm accuracy.

Oil, Gas, Power plants

Airport, Railway, Port

Bank, Treasury

Company, Community, Warehouse

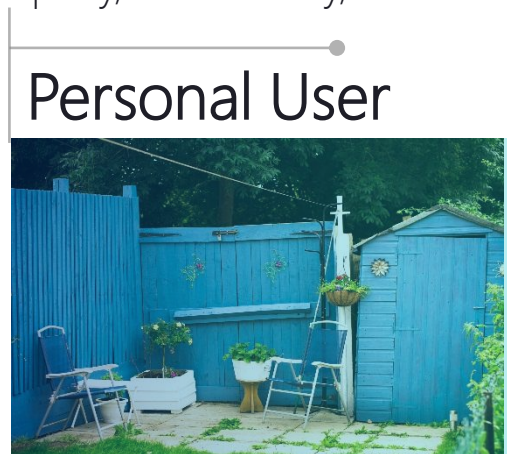

School, Museum

Prison, Court

Border

House, Villa

Face Recognition

What is Face Recognition?

Face Detection by camera

Face Detection by Recorder

Modeling

Face Recognition

Real-time Recognition

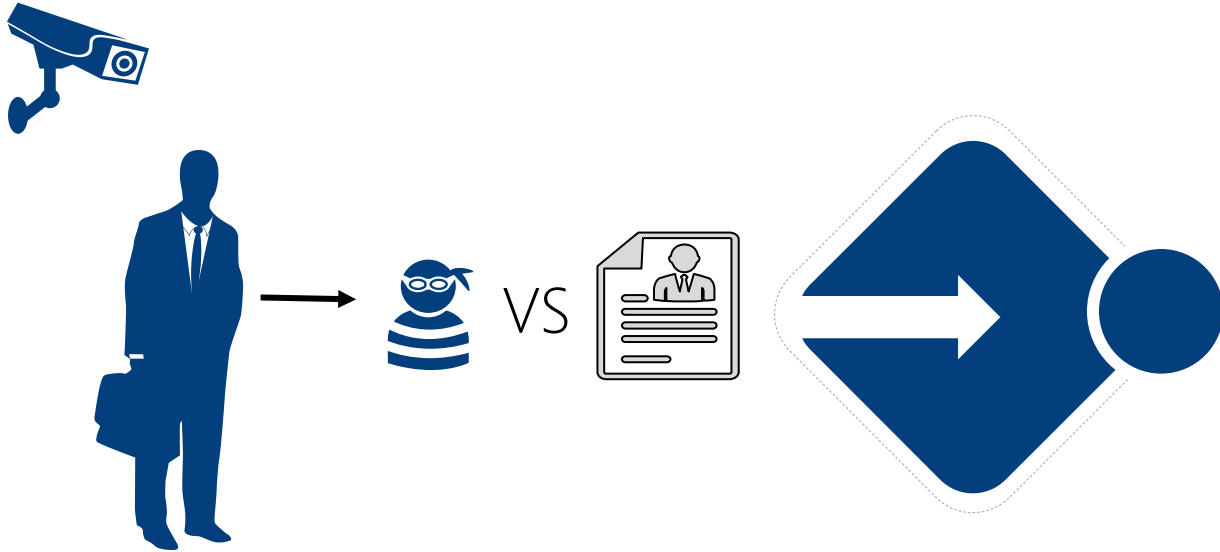

Metadata Search

Image Search

Real-time Recognition

Real-time Recognition

- Preview and verification of personals in real-time
- Active comparison with database, setting alarm trigger
- Supports up to 24 pic/s face recognition and 20 databases with up to 100,000 face images,.

Metadata Search

- Enhancing searching accuracy and efficiency
- Finding target persons quickly with facial metadata, including age, gender, glasses, mask, beard and expression
- AI searching video or pics from all channels within 7days videos

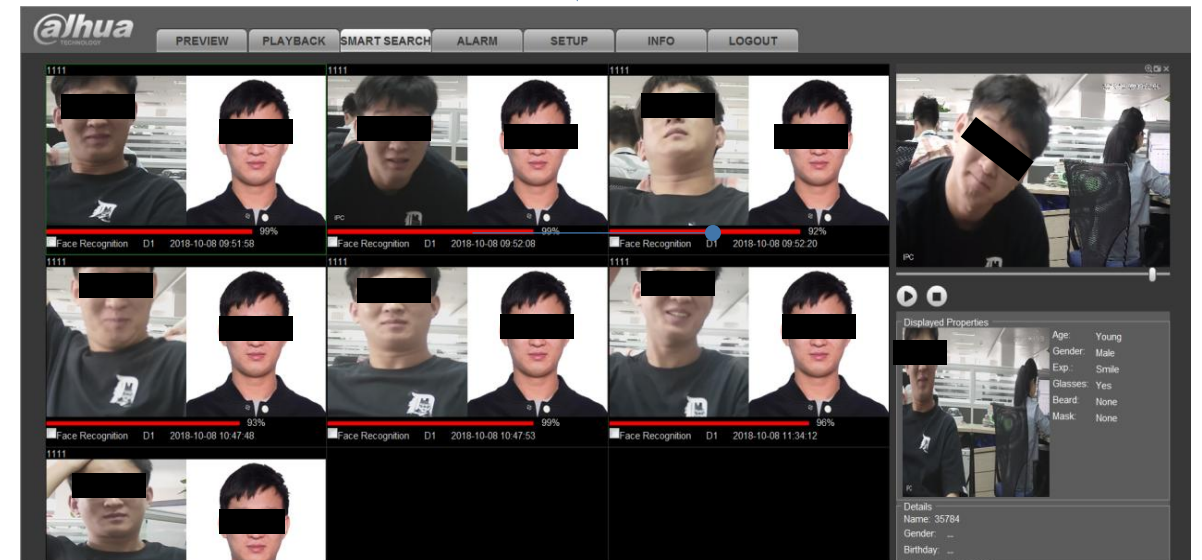

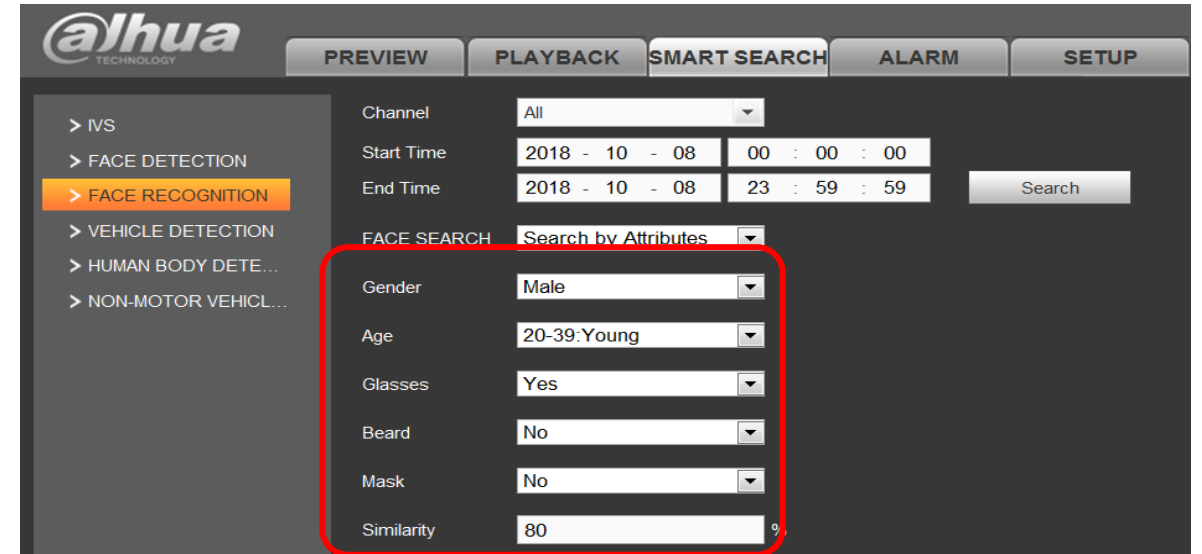

Image search

Search by face image function enable operators to quickly and easily search through multi channels and 7days duration, efficiently find out when and where a person of interest appeared.

- High searching accuracy for target persons, even for persons not yet included in the database by uploading face images.
- Up to 8 target face images search at same time.
- Support similarity threshold set for each target face image.

Where to use?

- Business Parks, Schools and other entrances and exits, attendance by Face Detection
- Main entrances and exits of Urban and Towns +Irregular Security Monitoring Point, Escaped Prisoner Identification
- Prison Entrance, Registration and Identification of Visitors
- Entrance of Supermarket/Shopping Mall, Petty Thief Recognition
- Football Field Entrance, Hooligan Recognition
- Key Areas of Banks, Non-Staff forbidden

Metadata

Why need Metadata?

Big data era, Big challenges to security industry. How to manage the data, get useful information and seek interested information from the storage data is very important.

Less space

Metadata is "data about data". It will get useful and efficient data from massive data. In other word, even if you do not record all the time, but you will not lose any important events and alerts.

Higher efficiency

It may take a trained officer or analyst using traditional methods to 1.5-2 hours to review just an hour of raw video footage. Metadata let searching more efficiency.

Better Compatibility

Video data can be easily understand by computer. Metadata makes data be useful to other platforms and business application

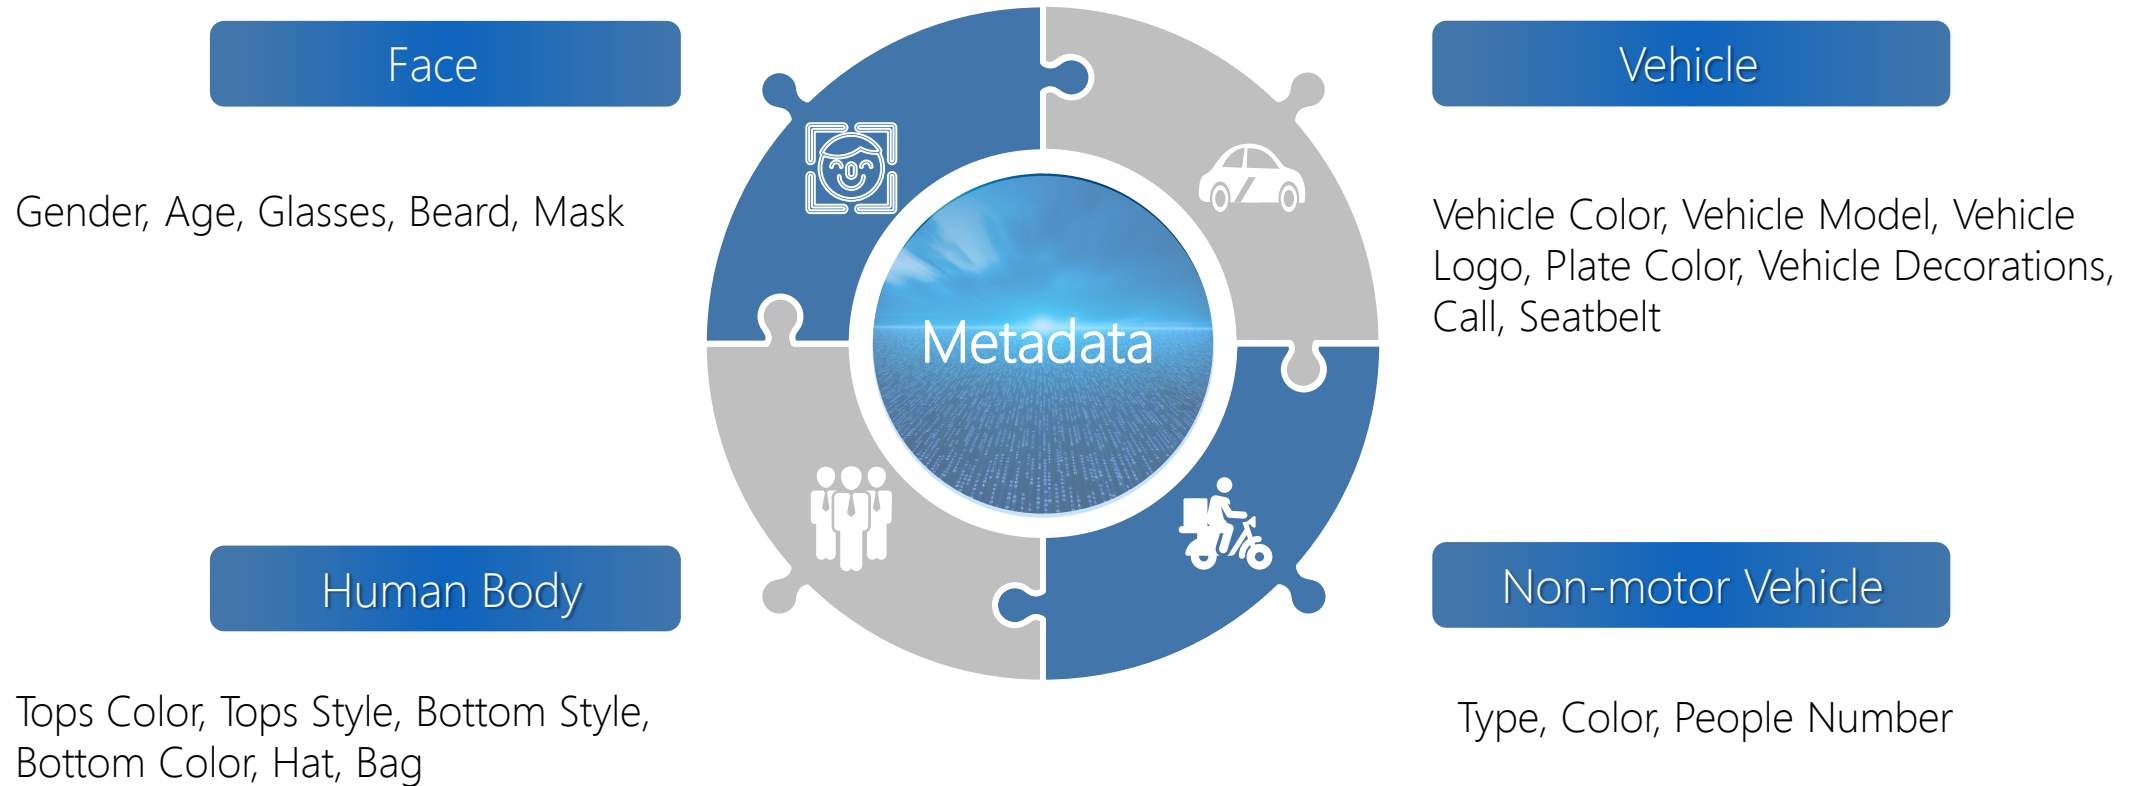

Real-time alerts

According to the metadata, real-time monitoring when events occurs
More reliable danger prevention.

What Metadata we have?

Metadata of Face, Vehicle, Human body, Non-motor vehicle makes it much easier for users to locate the interested objects.

Backup

Export metadata table
Backup pictures and videos

The image displays a screenshot of a video management system (VMS) interface. The interface is divided into several sections:

- Configuration:** A sidebar on the left lists various AI features like VIDEO DETEC..., SMART PLAN, IVS, FACE DETECT..., FACE RECOGN..., VIDEO STRUCT..., PEOPLE COUN..., HEAT MAP, ANPR, AUDIO DETECT, ALARM, ABNORMALITY, ALARM OUTPUT, and POS. The main area shows 'Video Struct...' settings for Channel (D2), AI by Device, and checkboxes for Personnel Detection, Face Detection, Vehicle Detection, and Non-motor Vehicle D... A 'Refresh' button is visible.
- AI Search:** A 'SMART SEARCH' window is overlaid, showing search criteria for Channel (D2), Start Time (2018-10-17 00:00:00), End Time (2018-10-17 23:59:59), License, Color (Black), Model, Logo, Plate Color, Decoration, Call, and Seatbelt. A magnifying glass icon is positioned next to this section.
- Backup:** A 'VEHICLE DETECTION' window shows a grid of vehicle detection results with license plate numbers and timestamps. A red box highlights a 'Backup' icon in the bottom right corner of this window.

Three callout boxes with icons are overlaid on the interface: a gear icon for 'Configuration', a magnifying glass for 'AI Search', and a download icon for 'Backup'.

Heat map
by Camera

ePoE

EoC

ANPR by ITC

- Recording

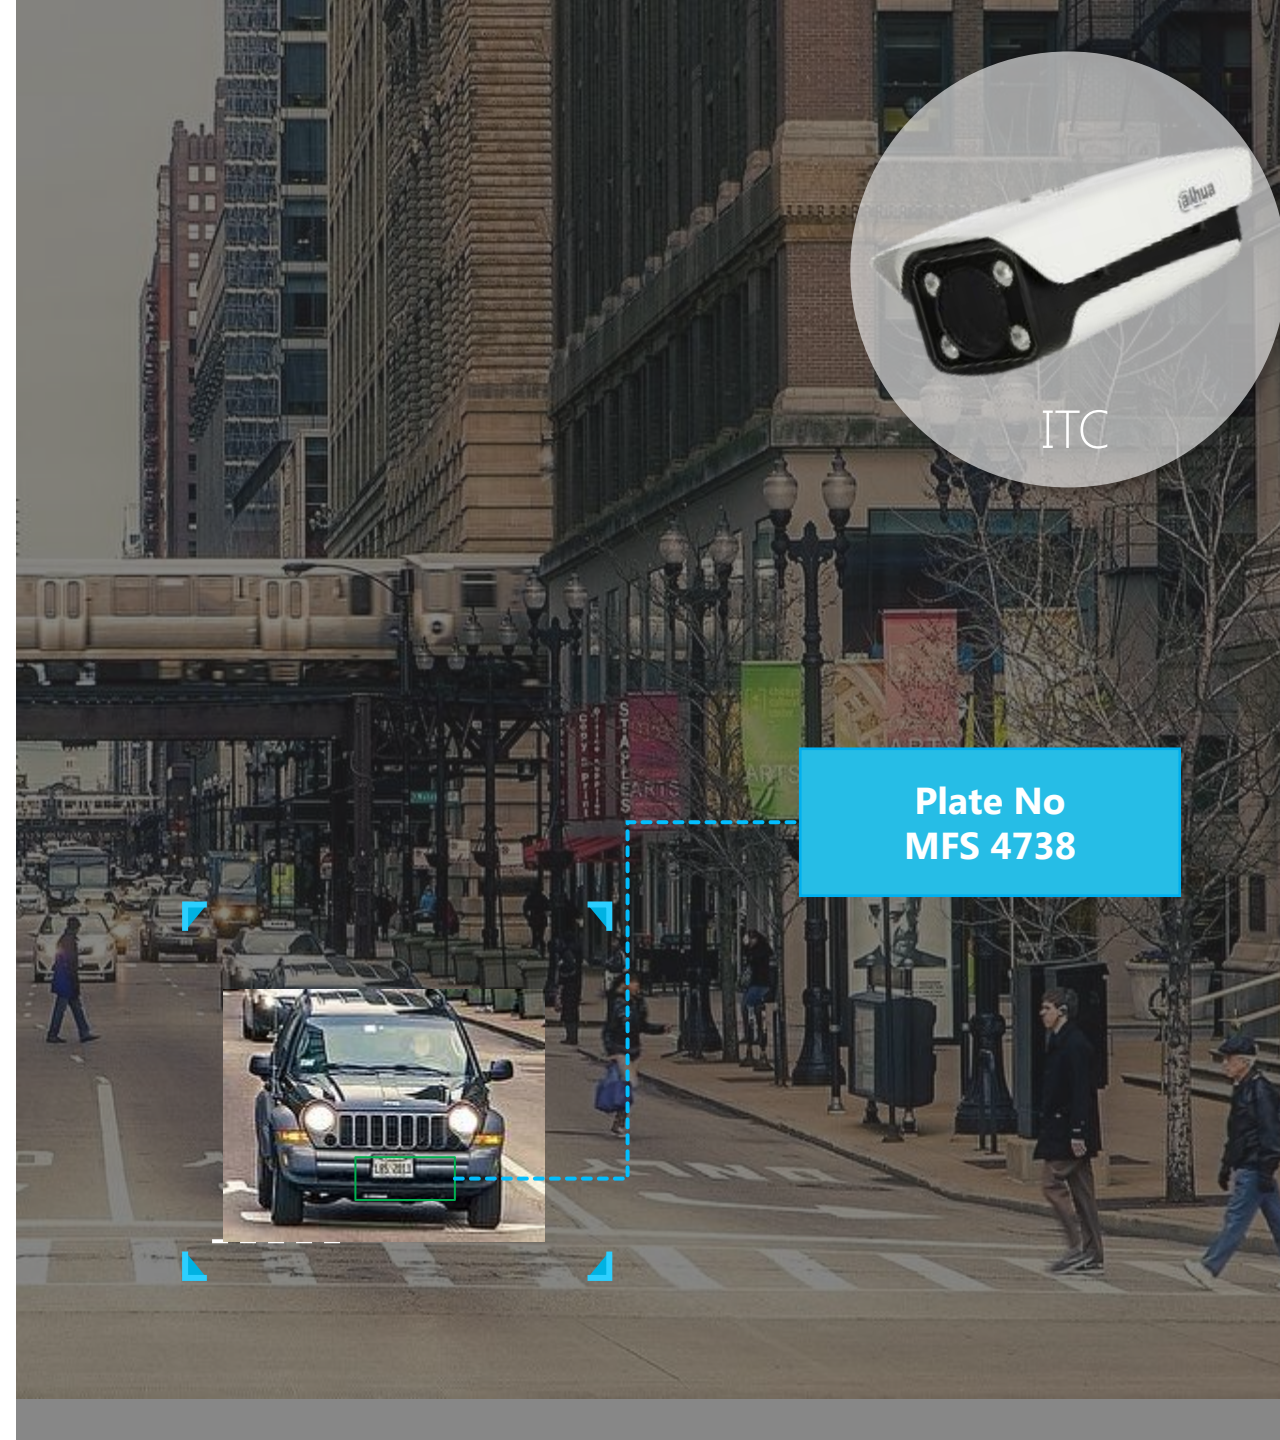

Get vehicle plate pictures and stream from ANPR camera, storage snapshots and video.

- B/W List

Add White/Black vehicle plate numbers
Supports ANPR list import/export

- Smart Play

Search video and images by date/time/license plate

POS

NVR5000-I integrates the POS (Point of Sale) function. Video and corresponding POS information can be shown simultaneously in both preview and playback modes.

People Counting by Camera

Reliable and efficient people counting

People counting cameras are typically placed above the area where you want to count the people that enter and leave. Embedded with powerful algorithm, it will provide high accurate and reliable data. Authorized users can preview the video anytime and export the data from NVR sites. It can be widely used in retail, airport, hotel where need to focus on the footfall.

Report

Export Daily/weekly/monthly report from NVR sites, offering a easy way to analyze foot traffic.

Preview

Capture and real-time monitor when previewing on NVR sites.

Heat Map by Camera

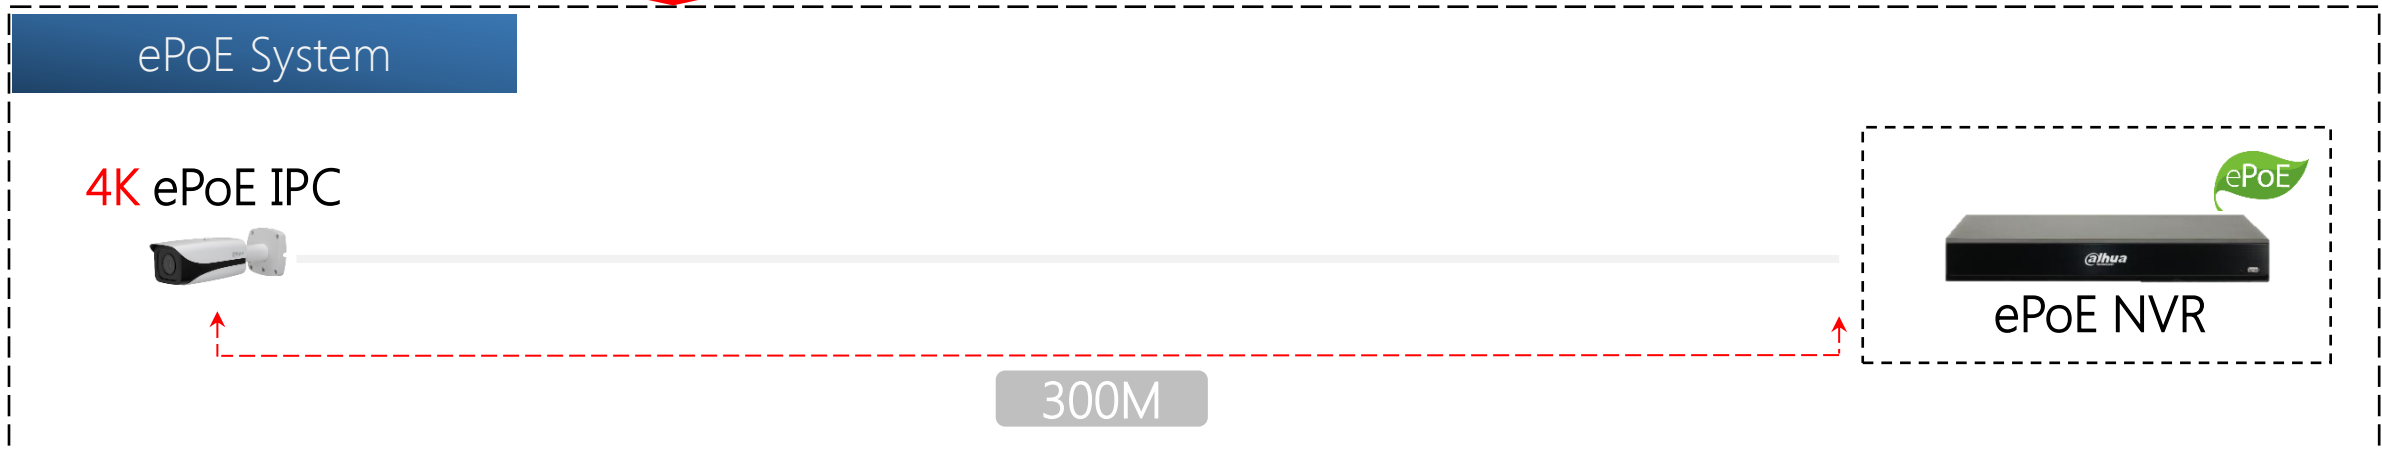

Heat map function can be applied to business intelligence and bring extra values to customers. The heat map function based on a moving object in time of space movement for analysis, find the most active area and output the report, which is to provide valuable data support for commercial applications.

ePoE

Upgrade

- Compared with PoE system, ePoE system can support **4K** video transmission up to **300m**
- ONE cable is enough, no extra devices needed

Notes:
Above contents are laboratory test data.

EoC

-- Stop hesitating to upgrade from analog to IP system

Performance

Performance

Model	 NVR5216-8P-I	 NVR5216-16P-I	 NVR5432-16P-I	 NVR5832/64-I
Face Recognition	Up to 24 face pictures /sec processing (4 channel video or 16 Picture stream)			
Database	20 libraries, 100,000 face images in total			
Perimeter Protection	16 channel, 10 IVS rules for each channel			
Metadata	Max 4 channels			
ANPR	Max 4 channels, one image per 5 seconds(by ITC camera)			
POS	Max 8 channels POS terminator input			
ePoE&EoC	1-8 PoE ports support ePoE & EoC(For PoE moles) 800m@10Mbps/300m@100Mbps
